

Supplemental Figure 3. Mean ΔIOP in initial ($TW_{initial}$) and final time window (TW_{final}) and the difference between them ($n=11$) for each gaze direction and eccentricity.

(A) mean ΔIOP during the initial 2 s at each gaze epoch ($TW_{initial}$). **(B)** mean ΔIOP during the last 2 s at each gaze epoch (TW_{final}). **(C)** difference between TW_{final} and $TW_{initial}$ ($d\Delta IOP$).

Gaze directions are presented as 'S' (Superior), 'ST' (Superior Temporal), 'T' (Temporal), 'IT' (Inferior Temporal), 'I' (Inferior), 'IN' (Inferior Nasal), 'N' (Nasal) and 'SN' (Superior Nasal). Magnitude of IOP-change scales with disc diameter. Stars indicate significance of paired T-tests corrected for multiple tests ($P \leq .01 = **$, $P \leq .001 = ***$).
